

## β-actin (PT0022R) rabbit mAb

Catalog No: YM8010

**Reactivity:** Human; Mouse; Rat;

**Applications:** WB;ELISA

**Target:** Actin  $\beta$ 

Fields: >>Rap1 signaling pathway;>>Phagosome;>>Apoptosis;>>Hippo signaling

pathway;>>Focal adhesion;>>Adherens junction;>>Tight junction;>>Platelet activation;>>Neutrophil extracellular trap formation;>>Leukocyte transendothelial migration;>>Thermogenesis;>>Regulation of actin cytoskeleton;>>Thyroid hormone signaling pathway;>>Oxytocin signaling pathway;>>Gastric acid secretion;>>Amyotrophic lateral sclerosis;>>Bacterial invasion of epithelial

cells;>>Vibrio cholerae infection;>>Pathogenic Escherichia coli

infection;>>Shigellosis;>>Salmonella infection;>>Yersinia infection;>>Influenza A;>>Proteoglycans in cancer;>>Hepatocellular carcinoma;>>Hypertrophic cardiomyopathy;>>Arrhythmogenic right ventricular cardiomyopathy;>>Dilated cardiomyopathy;>>Viral myocarditis;>>Fluid shear stress and atherosclerosis

Gene Name: ACTB

**Protein Name:** Actin cytoplasmic 1

Human Gene Id: 60

Human Swiss Prot P60709

No:

Mouse Gene ld: 11461

**Mouse Swiss Prot** 

No:

Rat Gene Id:

.

Rat Swiss Prot No: P60711

Immunogen: Synthesized peptide derived from human protein. AA range:1-100

**Specificity:** endogenous

P60710

81822

Sort:

No1:

ab6276

PBS, 50% glycerol, 0.05% Proclin 300, 0.05% BSA Formulation: Source: Monoclonal Rabbit IgG1, Kappa **Dilution:** WB 1:500-2000 ELISA: 1:20000 Protein A **Purification:** -15°C to -25°C/1 year(Do not lower than -25°C) **Storage Stability:** Molecularweight: 42kD Observed Band: 42kD **Cell Pathway:** Focal adhesion; Adherens Junction; Adherens Junction; Leukocyte transendothelial migration;Regulates Actin and Cytoskeleton;Vibrio cholerae infection:Pathogenic Escherichia coli infection:Hypertrophic ca **Background:** This gene encodes one of six different actin proteins. Actins are highly conserved proteins that are involved in cell motility, structure, and integrity. This actin is a major constituent of the contractile apparatus and one of the two nonmuscle cytoskeletal actins. [provided by RefSeq, Jul 2008], **Function:** disease:Defects in ACTB are a cause of dystonia juvenile-onset (DYTJ) [MIM:607371]. DYTJ is a form of dystonia with juvenile onset. Dystonia is defined by the presence of sustained involuntary muscle contraction, often leading to abnormal postures. DYTJ patients manifest progressive, generalized, dopaunresponsive dystonia, developmental malformations and sensory hearing loss..function:Actins are highly conserved proteins that are involved in various types of cell motility and are ubiquitously expressed in all eukaryotic cells., miscellaneous: In vertebrates 3 main groups of actin isoforms, alpha, beta and gamma have been identified. The alpha actins are found in muscle tissues and are a major constituent of the contractile apparatus. The beta and gamma actins coexist in most cell types as components of the cytoskeleton and as mediators of internal cell motility., similarity: Belongs to the Cytoplasm, cytoskeleton . Nucleus . Localized in cytoplasmic mRNP granules Subcellular containing untranslated mRNAs... Location: B-cell lymphoma, Brain, Cajal-Retzius cell, Eye, Fetal brain **Expression:** cortex, Foreskin, Hepatocellular car

**No3:** ab8227

**No4**: 1

## **Products Images**

Whole cell lysates were separated by 10% SDS-PAGE, and the membrane was blotted with anti- $\beta$ -actin(PT0022R) antibody. The HRP-conjugated Goat anti-Rabbit IgG(H + L) antibody was used to detect the antibody. Lane 1:Hela Predicted band size: 42kDa Observed band size: 42kDa
