<b>Background :</b>	CDC28 protein kinase regulatory subunit 2 (CKS2) Homo sapiens CKS2 protein binds to the catalytic subunit of the cyclin dependent kinases and is essential for their biological function. The CKS2 mRNA is found to be expressed in different patterns through the cell cycle in HeLa cells, which reflects specialized role for the encoded protein. [provided by RefSeq, Jul 2008],
<b>Function :</b>	function: Binds to the catalytic subunit of the cyclin dependent kinases and is essential for their biological function., similarity: Belongs to the CKS family., subunit: Forms an homohexamer that can probably bind six kinase subunits.,
<b>Subcellular Location :</b>	cyclin-dependent protein kinase holoenzyme complex, SCF ubiquitin ligase complex,
<b>Expression :</b>	Lung,
<b>Sort :</b>	4074
<b>Host :</b>	Rabbit
