

Rab 1B Polyclonal Antibody

Catalog No: YT3921

Reactivity: Human; Mouse; Rat

Applications: WB;ELISA;IHC

Target: Rab 1B

Fields: >>Legionellosis

Gene Name: RAB1B

Protein Name: Ras-related protein Rab-1B

Q9H0U4

Q9D1G1

Human Gene Id: 81876

Human Swiss Prot

Human Swiss Fib

No:

Mouse Gene Id: 76308

Mouse Swiss Prot

No:

Rat Swiss Prot No: P10536

Immunogen: Synthesized peptide derived from Rab 1B. at AA range: 50-130

Specificity: Rab 1B Polyclonal Antibody detects endogenous levels of Rab 1B protein.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500-2000;IHC 1:50-300; ELISA 2000-20000

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 22kD

Background: Members of the RAB protein family, such as RAB1B, are low molecular mass

monomeric GTPases localized on the cytoplasmic surfaces of distinct membrane-

bound organelles. RAB1B functions in the early secretory pathway and is

essential for vesicle transport between the endoplasmic reticulum (ER) and Golgi

(Chen et al., 1997 [PubMed 9030196]; Alvarez et al., 2003 [PubMed

12802079]).[supplied by OMIM, Jan 2009],

Function: function:Protein transport. Regulates vesicular transport between the

endoplasmic reticulum and successive Golgi

compartments.,miscellaneous:Rab-1B binds GTP and GDP and possesses intrinsic GTPase activity.,PTM:Prenylated; by GGTase II, only after interaction of the substrate with Rab escort protein 1 (REP1).,similarity:Belongs to the small GTPase superfamily. Rab family.,subcellular location:Targeted by REP1 to membranes of specific subcellular compartments including endoplasmic reticulum, Golgi apparatus, and intermediate vesicles between these two

compartments. In the GDP-form, colocalizes with GDI in the

cytoplasm., subunit: Interacts with MICAL1, MICAL2 and MICAL3. Interacts with GDI1; the interaction requires the GDP-bound state. Interacts with CHM/REP1; the interaction requires the GDP-bound form and is necessary for prenylation by

GGTase II.,

Subcellular Location : Cytoplasm . Membrane ; Lipid-anchor ; Cytoplasmic side . Preautophagosomal structure membrane ; Lipid-anchor ; Cytoplasmic side . Cytoplasm, perinuclear region . Targeted by REP1 to membranes of specific subcellular compartments including endoplasmic reticulum, Golgi apparatus, and intermediate vesicles between these two compartments (PubMed:11389151). In the GDP-form, colocalizes with GDI in the cytoplasm (PubMed:11389151). Co-localizes with MTMR6 to the endoplasmic reticulum-Golgi intermediate compartment and to the peri-Golgi region (By similarity).

Expression: B-cell lymphoma, Brain, Muscle, Pancreas,

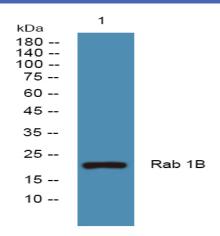

Sort : 13212

No4:

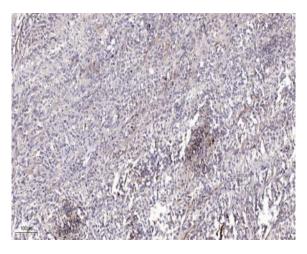

Host: Rabbit

Modifications: Unmodified
