

X11β Polyclonal Antibody

Catalog No: YT4910

Reactivity: Human; Mouse; Rat

Applications: IHC;IF;WB;ELISA

Q99767

P98084

Target: $X11\beta$

Gene Name: APBA2

Protein Name: Amyloid beta A4 precursor protein-binding family A member 2

Human Gene Id: 321

Human Swiss Prot

No:

Mouse Gene ld: 11784

Mouse Swiss Prot

No:

Rat Gene ld: 83610

Rat Swiss Prot No: 035431

Immunogen: The antiserum was produced against synthesized peptide derived from human

APBA2. AA range:371-420

Specificity: X11β Polyclonal Antibody detects endogenous levels of X11β protein.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution : WB 1:500-2000 IHC 1:100 - 1:300. ELISA: 1:20000.. IF 1:50-200

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 83kD

Background: amyloid beta precursor protein binding family A member 2(APBA2) Homo

sapiens The protein encoded by this gene is a member of the X11 protein family. It is a neuronal adapter protein that interacts with the Alzheimer's disease amyloid precursor protein (APP). It stabilizes APP and inhibits production of proteolytic APP fragments including the A beta peptide that is deposited in the brains of Alzheimer's disease patients. This gene product is believed to be involved in signal transduction processes. It is also regarded as a putative vesicular trafficking protein in the brain that can form a complex with the potential to couple synaptic vesicle exocytosis to neuronal cell adhesion. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008],

Function: domain:Composed of an N-terminal domain that binds STXBP1, a middle

phosphotyrosine-binding domain (PID/PTB) that mediates binding with the cytoplasmic domain of the beta-amyloid precursor protein, and two C-terminal

PDZ domains thought to attach proteins to the plasma

membrane.,function:Putative function in synaptic vesicle exocytosis by binding to STXBP1, an essential component of the synaptic vesicle exocytotic machinery. May modulate processing of the beta-amyloid precursor protein (APP) and hence formation of beta-APP.,similarity:Contains 1 PID domain.,similarity:Contains 2 PDZ (DHR) domains.,subunit:Part of a multimeric complex containing STXBP1 and syntaxin-1. Binds to the cytoplasmic domain of amyloid protein beta, and to the nuclear factor NF-kappa-B/p65 via its PDZ domain. Interacts with the amino-

terminal domain of APBA2BP., tissue specificity: Brain.,

Subcellular plasma membrane, synaptic vesicle, Location :

Expression : Brain.

Sort: 24337

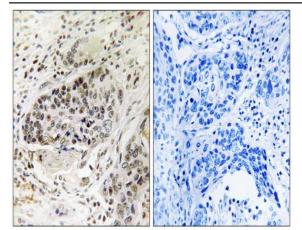

No4: 1

Host: Rabbit

Modifications: Unmodified
