

TIMP1 (ABT-TIMP1) Mouse mAb

Catalog No: YM6673

Reactivity: Human

Applications: WB;ELISA

Target: TIMP1

Fields: >>HIF-1 signaling pathway

Gene Name: TIMP1 CLGI TIMP

Protein Name : Tissue Inhibitor of Metalloproteinases 1(TIMP1)

Human Gene Id: 7076

Human Swiss Prot

No:

Immunogen: Synthesized peptide derived from human Tissue Inhibitor of Metalloproteinases

1(TIMP1) AA range: 50-150

Specificity: This antibody detects endogenous levels of human Tissue Inhibitor of

Metalloproteinases 1(TIMP1). Heat-induced epitope retrieval (HIER) Citrate

buffer of pH6.0 was highly recommended as antigen repair

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Mouse, Monoclonal/IgG1, Kappa

P01033

Dilution: WB 1:20-50, ELISA 1:5000-20000

Purification: The antibody was affinity-purified from mouse ascites by affinity-

chromatography using specific immunogen.

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Molecularweight: 23kD

1/2

Background:

This gene belongs to the TIMP gene family. The proteins encoded by this gene family are natural inhibitors of the matrix metalloproteinases (MMPs), a group of peptidases involved in degradation of the extracellular matrix. In addition to its inhibitory role against most of the known MMPs, the encoded protein is able to promote cell proliferation in a wide range of cell types, and may also have an antiapoptotic function. Transcription of this gene is highly inducible in response to many cytokines and hormones. In addition, the expression from some but not all inactive X chromosomes suggests that this gene inactivation is polymorphic in human females. This gene is located within intron 6 of the synapsin I gene and is transcribed in the opposite direction. [provided by RefSeq, Jul 2008],

Function:

function:Complexes with metalloproteinases (such as collagenases) and irreversibly inactivates them. Also mediates erythropoiesis in vitro; but, unlike IL-3, it is species-specific, stimulating the growth and differentiation of only human and murine erythroid progenitors. Known to act on MMP-1, MMP-2, MMP-3, MMP-7, MMP-8, MMP-9, MMP-10, MMP-11, MMP-12, MMP-13 and MMP-16. Does not act on MMP-14.,PTM:The activity of TIMP1 is dependent on the presence of disulfide bonds.,similarity:Belongs to the protease inhibitor I35 (TIMP) family.,similarity:Contains 1 NTR domain.,

Subcellular Location:

Secreted.

Expression:

Detected in rheumatoid synovial fluid (at protein level).

Sort:

17186

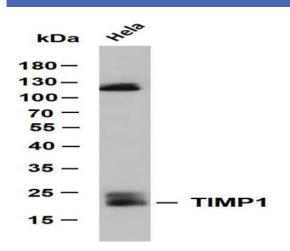

Host:

Mouse

Modifications:

Unmodified

Products Images

Whole cell lysates were separated by 10% SDS-PAGE, and the membrane was blotted with anti-TIMP1 (ABT-TIMP1)antibody. The HRP-conjugated Goat anti-Mouse IgG(H + L) antibody was used to detect the antibody. Lane 1: Hela Predicted band size: 23kDa Observed band size: 23kDa
