

GluR4 (phospho Ser862) Polyclonal Antibody

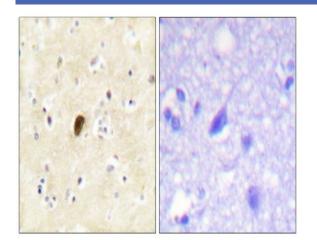

Catalog No :	YP0740
Reactivity :	Human;Mouse;Rat
Applications :	WB;IHC;IF;ELISA
Target :	GluR4
Fields :	>>cAMP signaling pathway;>>Neuroactive ligand-receptor interaction;>>Circadian entrainment;>>Retrograde endocannabinoid signaling;>>Glutamatergic synapse;>>Dopaminergic synapse;>>Huntington disease;>>Pathways of neurodegeneration - multiple diseases;>>Amphetamine addiction;>>Nicotine addiction
Gene Name :	GRIA4
Protein Name :	Glutamate receptor 4
Human Gene Id :	2893
Human Swiss Prot	P48058
No : Mouse Gene Id :	14802
Mouse Swiss Prot	Q9Z2W8
No : Rat Gene Id :	29629
Rat Swiss Prot No :	P19493
Immunogen :	The antiserum was produced against synthesized peptide derived from human GluR4 around the phosphorylation site of Ser862. AA range:828-877
Specificity :	Phospho-GluR4 (S862) Polyclonal Antibody detects endogenous levels of GluR4 protein only when phosphorylated at S862.
Formulation :	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Best Tools for immunolog	y Research
Source :	Polyclonal, Rabbit,IgG
Dilution :	WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:5000 IF 1:50-200
Purification :	The antibody was affinity-purified from rabbit antiserum by affinity-
	chromatography using epitope-specific immunogen.
Concentration :	1 mg/ml
Storage Stability :	-15°C to -25°C/1 year(Do not lower than -25°C)
Observed Band :	100kD
Call Dathway	Neuropotive ligend recenter interaction:
Cell Pathway :	Neuroactive ligand-receptor interaction;
Background :	Glutamate receptors are the predominant excitatory neurotransmitter receptors
Background.	in the mammalian brain and are activated in a variety of normal neurophysiologic
	processes. These receptors are heteromeric protein complexes composed of
	multiple subunits, arranged to form ligand-gated ion channels. The classification
	of glutamate receptors is based on their activation by different pharmacologic
	agonists. The subunit encoded by this gene belongs to a family of AMPA (alpha-
	amino-3-hydroxy-5-methyl-4-isoxazole propionate)-sensitive glutamate receptors, and is subject to RNA editing (AGA->GGA; R->G). Alternative splicing of this
	gene results in transcript variants encoding different isoforms, which may vary in
	their signal transduction properties. Some haplotypes of this gene show a positive
	association with schizophrenia. [provided by RefSeq, Jul 2008],
Function :	function:lonotropic glutamate receptor. L-glutamate acts as an excitatory
	neurotransmitter at many synapses in the central nervous system. Binding of the excitatory neurotransmitter L-glutamate induces a conformation change, leading
	to the opening of the cation channel, and thereby converts the chemical signal to
	an electrical impulse. The receptor then desensitizes rapidly and enters a
	transient inactive state, characterized by the presence of bound
	agonist.,miscellaneous:The postsynaptic actions of Glu are mediated by a variety
	of receptors that are named according to their selective agonists. This receptor binds AMPA (quisqualate) > glutamate > kainate.,PTM:Palmitoylated.
	Depalmitoylated upon glutamate stimulation. Cys-611 palmitoylation leads to
	Golgi retention and decreased cell surface expression. In contrast, Cys-837
	palmitoylation does not affect cell surface expression but regul
Subcellular	Cell membrane; Multi-pass membrane protein. Cell junction, synapse,
Location :	postsynaptic cell membrane; Multi-pass membrane protein. Cell projection,
	dendrite. Interaction with CNIH2, CNIH3 and PRKCG promotes cell surface expression.
Expression :	Brain,Donated clones,PCR rescued clones,
