

SPAK (phospho Ser309) Polyclonal Antibody

Catalog No: YP0799

Reactivity: Human; Mouse; Rat

Applications: WB;IHC;IF;ELISA

Target: SPAK

Gene Name: STK39

Protein Name: STE20/SPS1-related proline-alanine-rich protein kinase

Q9UEW8

Q9Z1W9

Human Gene Id: 27347

Human Swiss Prot

...

No:

Mouse Gene ld: 53416

No:

Rat Gene ld: 54348

Rat Swiss Prot No: 088506

Immunogen: The antiserum was produced against synthesized peptide derived from human

STK39 around the phosphorylation site of Ser311. AA range:277-326

Specificity: Phospho-SPAK (S311) Polyclonal Antibody detects endogenous levels of SPAK

protein only when phosphorylated at S311.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:5000.. IF 1:50-200

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 60kD

Background: This gene encodes a serine/threonine kinase that is thought to function in the

cellular stress response pathway. The kinase is activated in response to hypotonic stress, leading to phosphorylation of several cation-chloride-coupled cotransporters. The catalytically active kinase specifically activates the p38 MAP kinase pathway, and its interaction with p38 decreases upon cellular stress, suggesting that this kinase may serve as an intermediate in the response to

cellular stress. [provided by RefSeq, Jul 2008],

Function: catalytic activity:ATP + a protein = ADP + a phosphoprotein.,domain:PAPA box

(proline-alanine repeats) may target the kinase to a specific subcellular location by facilitating interaction with intracellular proteins such as actin or actin-like

proteins., function: May act as a mediator of stress-activated

signals., similarity: Belongs to the protein kinase superfamily. STE Ser/Thr protein

kinase family. STE20 subfamily.,similarity:Contains 1 protein kinase domain.,subcellular location:Nucleus when caspase-cleaved.,tissue

specificity:Predominantly expressed in brain and pancreas followed by heart,

lung, kidney, skeletal muscle, liver, placenta and testis.,

Subcellular Location:

Cytoplasm . Nucleus . Nucleus when caspase-cleaved. .

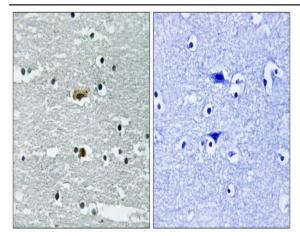

Expression: Predominantly expressed in brain and pancreas followed by heart, lung, kidney,

skeletal muscle, liver, placenta and testis.

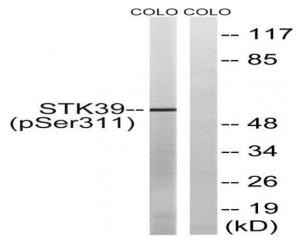

Sort: 16536

No4: 1
