

GPR56 (PN0288) Nb-FC recombinant antibody

YA0588 Catalog No:

Reactivity: Human

ELISA;FCM **Applications:**

GPR56 Target:

Gene Name: ADGRG1 GPR56 TM7LN4 TM7XN1 UNQ540/PRO1083

Protein Name: Adhesion G-protein coupled receptor G1 (G-protein coupled receptor 56)

(Protein TM7XN1) [Cleaved into: ADGRG1 N-terminal fragment (ADGRG1 NT)

(GPR56 N-terminal fragment) (GPR56 NT) (GPR56(N)) (GPR56 e

Human Gene Id: 9289

Human Swiss Prot

No:

Q9Y653

Purified recombinant Human GPR56 Immunogen:

This recombinant monoclonal antibody can detects endogenous levels of **Specificity:**

GPR56 protein.

Formulation: Phosphate-buffered solution

Source: Camel, chimeric fusion of Nanobody (VHH) and mouse IgG1 Fc domain,

recombinantly produced from 293F cell

Dilution: ELISA 1:5000-100000;FCM 1-2µg/Test

Purification: Recombinant Expression and Affinity purified

Concentration: Please check the information on the tube

-15°C to -25°C/1 year(Avoid freeze / thaw cycles) **Storage Stability:**

Background: This gene encodes a member of the G protein-coupled receptor family and

regulates brain cortical patterning. The encoded protein binds specifically to

transglutaminase 2, a component of tissue and tumor stroma implicated as an inhibitor of tumor progression. Mutations in This gene are associated with a brain malformation known as bilateral frontoparietal polymicrogyria. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Feb 2014]

Function:

disease:Defects in GPR56 are the cause of bilateral frontoparietal polymicrogyria (BFPP) [MIM:606854]. BFPP is characterized by disorganized cortical lamination that is most severe in frontal cortex.,Could be involved in cell-cell interactions.,similarity:Belongs to the G-protein coupled receptor 2 family. LN-TM7 subfamily.,similarity:Contains 1 GPS domain.,tissue specificity:Widely distributed with highest levels found in thyroid gland, brain and heart. Expressed in a great number of tumor cells.,

Subcellular Location:

Cell membrane; Multi-pass membrane protein.; [ADGRG1 N-terminal fragment]: Secreted.; [ADGRG1 C-terminal fragment]: Membrane raft. Interaction with its ligand COL3A1 leads to the release of ADGRG1 NT from the membrane and triggers the association of ADGRG1 CT with lipid rafts..

Expression:

Widely distributed with highest levels found in thyroid gland, brain and heart. Expressed in a great number of tumor cells. Expression is down-regulated in different tumors from highly metastatic cells.
