

Recombinant SARS-CoV-2 Covid-19 Spike protein fragment 2

Catalog No: YD2193

Reactivity: Human virus

Applications: ELISA ECL Immunogold

Purity: >90% as determined by SDS-PAGE

Fields: For research use only .Not for use in clinical diagnostic procedures.

Gene Name: S

Protein Name: Spike glycoprotein, Spike protein

Human Gene Id: QHD43416.1

Source: E.coli

Dilution: Testing in progress

Concentration: >90% as determined by SDS-PAGE

Storage Stability: Use a manual defrost freezer and avoid repeated freeze thaw cycles. Store at 2

to 8 °C for one week . Store at -20 to -80 °C for twelve months from the date of

receipt.

Molecularweight: 19.69kDa

Background: Recombinant SARS-CoV-2 S protein fragment 2 is produced by E.coli

expression system and the target gene encoding Tyr1047-Gln1201 is expressed

with N-His Tag

Function: Protein S (PROS1) is glycoprotein and expressed in many cell types supporting

its reported involvement in multiple biological processes that include coagulation,

apoptosis, cancer development and progression, and the innate immune

response. Known receptors bind S1 are ACE2, angiotensin-converting enzyme 2, DPP4, CEACAM etc.. The spike (S) glycoprotein of coronaviruses is known to be essential in the binding of the virus to the host cell at the advent of the infection process. Most notable is severe acute respiratory syndrome (SARS). The severe

acute respiratory syndrome-coronavirus (SARS-CoV) spike (S) glycoprotein alone can mediate the membrane fusion required for virus entry and cell fusion. It is also a major immunogen and a target for entry inhibitors. It's been reported that 2019-nCoV can infect the human respiratory epithelial cells through interaction with the human ACE2 receptor.
