

Gastrin (ABT-GAST) IHC kit

Catalog No: IHCM6060

Reactivity: Human;

Applications: IHC

Target: Gastrin

Fields: >> Gastric acid secretion

Gene Name: GAST GAS

Protein Name: Gastrin [Cleaved into: Gastrin-71 (Gastrin component I); Gastrin-52 (G52); Big

gastrin (Gastrin component II) (Gastrin-34) (G34); Gastrin (Gastrin component III)

(Gastrin-17) (G17); Gastrin-14 (G14);

Human Gene Id: 2520

Human Swiss Prot

No:

Immunogen: Synthesized peptide derived from human Gastrin AA range: 50-101

Specificity: The antibody can specifically recognize human Gastrin protein.

Source : Mouse, Monoclonal/IgG3, kappa

P01350

Purification: The antibody was affinity-purified from ascites by affinity-chromatography using

specific immunogen.

Storage Stability: 2°C to 8°C/1 year

Background: Gastrin is a hormone whose main function is to stimulate secretion of

hydrochloric acid by the gastric mucosa, which results in gastrin formation inhibition. This hormone also acts as a mitogenic factor for gastrointestinal epithelial cells. Gastrin has two biologically active peptide forms, G34 and G17.

[provided by RefSeq, Jul 2008],

Function: function:Gastrin stimulates the stomach mucosa to produce and secrete

hydrochloric acid and the pancreas to secrete its digestive enzymes. It also

stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and intestine.,online information:Gastrin entry,PTM:Sulfation enhances proteolytic processing, and blocks peptide degradation. Levels of sulfation differ between proteolytically-cleaved gastrins. Thus, gastrin-6 is almost 73% sulfated, whereas the larger gastrins are less than 50% sulfated. Sulfation levels are also tissue-specific.,PTM:Two different processing pathways probably exist in antral G-cells. In the dominant pathway progastrin is cleaved at three sites resulting in two major bioactive gastrins, gastrin-34 and gastrin-17. In the putative alternative pathway, progastrin may be processed only at the most C-terminal dibasic site resul

Subcellular Location:

Cytoplasmic

Expression:

Gastric mucosa,

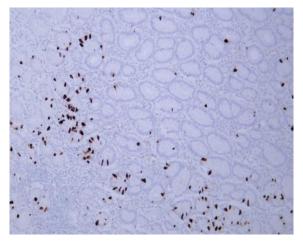

Tag:

hot

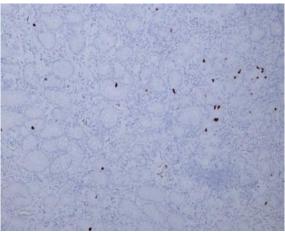

Sort:
