

STAT2 protein

Catalog No: YD0098

Reactivity: Human

Applications: WB;SDS-PAGE

Gene Name: STAT2

Protein Name: STAT2 protein

Sequence: Amino acid: 9-217, with his-MBP tag.

P52630

Q9WVL2

Human Gene Id: 6773

Human Swiss Prot

No:

Mouse Swiss Prot

No:

Formulation: Liquid in PBS

Concentration: SDS-PAGE >90%

Storage Stability: -20°C/6 mouth,-80°C for long storage

Background: function: Signal transducer and activator of transcription that mediates signaling

by type I IFNs (IFN-alpha and IFN-beta). Following type I IFN binding to cell surface receptors, Jak kinases (TYK2 and JAK1) are activated, leading to tyrosine phosphorylation of STAT1 and STAT2. The phosphorylated STATs dimerize, associate with ISGF3G/IRF-9 to form a complex termed ISGF3 transcription factor, that enters the nucleus. ISGF3 binds to the IFN stimulated response element (ISRE) to activate the transcription of interferon stimulated genes, which drive the cell in an antiviral state.,PTM:Tyrosine phosphorylated in response to IFN-alpha.,similarity:Belongs to the transcription factor STAT family.,similarity:Contains 1 SH2 domain.,subcellular location:Translocated into the nucleus upon activation by IFN-alpha/beta.,subunit:Interacts with

ISGF3G/IRF-9 in the cytoplasm. Heterodimer with STAT1 upon IFN-alpha/beta induced phosphorylation. Interacts with CRSP2 and CRSP6. Interacts with

Simian virus 5 protein V and rabies virus phosphoprotein.,

1/2

Function: transcription, regulation of transcription, DNA-dependent, regulation of

transcription from RNA polymerase II promoter,intracellular signaling cascade, protein kinase cascade, JAK-STAT cascade, response to virus, regulation of transcription, regulation of RNA metabolic process,

Subcellular Location :

Cytoplasm . Nucleus . Translocated into the nucleus upon activation by IFN-

alpha/beta..
