

CK19 Monoclonal Antibody(11F5)

Catalog No: YM3051

Reactivity: Human; Mouse; Rat

Applications: IHC;IF

Target: Cytokeratin 19

Fields: >>Estrogen signaling pathway;>>Staphylococcus aureus infection

Gene Name: KRT19

Protein Name: Keratin type I cytoskeletal 19

Human Gene Id: 3880

Human Swiss Prot

P08727

No:

Mouse Gene Id: 16669

Mouse Swiss Prot

P19001

No:

Rat Gene Id: 360626

Rat Swiss Prot No: Q63279

Immunogen: Synthetic Peptide of CK19

Specificity: The antibody detects endogenous CK19 proteins.

Formulation: PBS, pH 7.4, containing 0.5%BSA, 0.02% sodium azide as Preservative and

50% Glycerol.

Source: Monoclonal, Mouse

Dilution: IHC 1:200-400;IF ICC 1:200-400

1/3

Purification: The antibody was affinity-purified from mouse ascites by affinity-

chromatography using specific immunogen.

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 44kD

Background: The protein encoded by this gene is a member of the keratin family. The keratins

are intermediate filament proteins responsible for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. The type I cytokeratins consist of acidic proteins which are arranged in pairs of heterotypic keratin chains. Unlike its related family members, this smallest known acidic cytokeratin is not paired with a basic cytokeratin in epithelial cells. It is specifically expressed in the periderm, the transiently superficial layer that envelopes the developing epidermis. The type I cytokeratins are clustered in a region of

chromosome 17q12-q21. [provided by RefSeq, Jul 2008],

Function: developmental stage: Present in hair follicles at all stages of

development.,domain:This keratin differs from all other IF proteins in lacking the C-terminal tail domain.,function:Involved in the organization of myofibers. Together with KRT8, helps to link the contractile apparatus to dystrophin at the costameres

of striated muscle.,miscellaneous:There are two types of cytoskeletal and microfibrillar keratin: I (acidic; 40-55 kDa) and II (neutral to basic; 56-70

kDa).,similarity:Belongs to the intermediate filament

family., subunit: Heterotetramer of two type I and two type II keratins. Interacts with

PNN and the actin-binding domain of DMD. Interacts with HCV core

protein.,tissue specificity: Expressed in a defined zone of basal keratinocytes in the deep outer root sheath of hair follicles. Also observed in sweat gland and

mammary gland ductal and secretory cells, bile ducts, gastrointestin

Subcellular Location:

intermediate filament, plasma membrane, dystrophin-associated glycoprotein

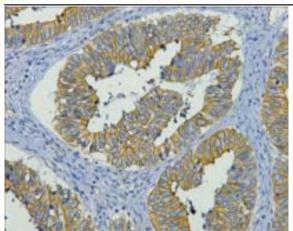

complex,Z disc,sarcolemma,costamere,extracellular exosome,cell

periphery, terminal web,

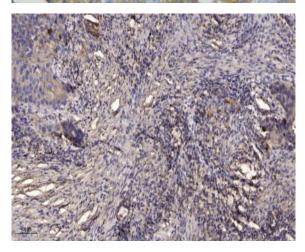

Expression:

Expressed in a defined zone of basal keratinocytes in the deep outer root sheath of hair follicles. Also observed in sweat gland and mammary gland ductal and secretory cells, bile ducts, gastrointestinal tract, bladder urothelium, oral epithelia, esophagus, ectocervical epithelium (at protein level). Expressed in epidermal basal cells, in nipple epidermis and a defined region of the hair follicle. Also seen in a subset of vascular wall cells in both the veins and artery of human umbilical cord, and in umbilical cord vascular smooth muscle. Observed in muscle fibers accumulating in the costameres of myoplasm at the sarcolemma in structures that contain dystrophin and spectrin.

Products Images

IHC staining of human colon cancer tissue, diluted at 1:200.

Immunohistochemical analysis of paraffin-embedded human Squamous cell carcinoma of lung. 1, Antibody was diluted at 1:200(4° overnight). 2, Tris-EDTA,pH9.0 was used for antigen retrieval. 3,Secondary antibody was diluted at 1:200(room temperature, 45min).
