**Applications** 

IHC,IF,ELISA

# Ki-67 Rabbit pAb

CatalogNo: YT2467

## **Key Features**

Host Species Reactivity
• Rabbit • Human

MW Isotype360kD (Observed)IgG

#### **Recommended Dilution Ratios**

IHC 1:100-1:300 IF 1:200-1:1000 ELISA 1:20000

Not yet tested in other applications.

## Storage

Storage\* -15°C to -25°C/1 year(Do not lower than -25°C)

**Formulation** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

#### **Basic Information**

**Clonality** Polyclonal

### Immunogen Information

**Immunogen** The antiserum was produced against synthesized peptide derived from human Ki67. AA

range:3207-3256

**Specificity** Ki-67 Polyclonal Antibody detects endogenous levels of Ki-67 protein.

## | Target Information

Gene name MKI67

**Protein Name** Ki 67

Organism	Gene ID	UniProt ID
Human	<u>4288</u> ;	<u>P46013;</u>

#### Cellular Localization

Chromosome . Nucleus . Nucleus, nucleolus . Associates with the surface of the mitotic chromosome, the perichromosomal layer, and covers a substantial fraction of the mitotic chromosome surface (PubMed:27362226). Associates with satellite DNA in G1 phase (PubMed:9510506). Binds tightly to chromatin in interphase, chromatin-binding decreases in mitosis when it associates with the surface of the condensed chromosomes (PubMed:15896774, PubMed:22002106). Predominantly localized in the G1 phase in the perinucleolar region, in the later phases it is also detected throughout the nuclear interior, being predominantly localized in the nuclear matrix (PubMed:22002106).

#### Tissue specificity Epithelium,

## **Function** developmental stage:Expression

developmental stage:Expression of this antigen occurs preferentially during late G1, S, G2 and M phases of the cell cycle, while in cells in G0 phase the antigen cannot be detected.,Function:Thought to be required for maintaining cell proliferation.,online information:Ki-67 entry,similarity:Contains 1 FHA domain.,subcellular

location:Predominantly localized in the G1 phase in the perinucleolar region, in the later phases it is also detected throughout the nuclear interior, being predominantly localized in the nuclear matrix. In mitosis, it is present on all chromosomes.,subunit:Interacts with

KIF15. Binds through the FHA domain to MKI67IP.,
