

Mouse/Rabbit Sextuple-Target Seven-Color Fluorescence Detection Kit

CatalogNo: RS0039

| Key Features

Applications

- IF, mIHC

| Recommended Dilution Ratios

Ready to use

| Storage

Storage*	See datasheet

| Immunogen Information

| Target Information

Protein Name

| Validation Data

Fluorescence multiplex immunohistochemical analysis of Mouse brain tissue (formalin-fixed paraffin-embedded section). The immunostaining was performed by Sextuple-Fluorescence kit (RS0039, Immunoway). GFAP mouse mAb(YM4426 Immunoway) green, S100 mouse mAb(YM6987 Immunoway) cyan, Neurofilament mouse mAb(YM6897 Immunoway) purple, Iba 1 mouse mAb(YM4765 Immunoway) red, CD8 a mouse mAb(YM4815 Immunoway) yellow, The section was incubated in 5 rounds of staining; sequentially for Anti-antibodies; each using a separate fluorescent tyramide signal amplification system. EDTA based antigen retrieval (Immunoway YS0004, pH 9.0, 20 minutes) was used in between rounds of tyramide signal amplification to remove the antibody from the previous round, to avoid any cross-reactivity. DAPI (dark blue) was used as a nuclear counter stain. Microscopy and pseudocoloring of individual dyes was performed using a Slideviewer Imaging System (Excilone).

Fluorescence multiplex immunohistochemical analysis of Human colon carcinoma (formalin-fixed paraffin-embedded section). The immunostaining was performed by Sextuple-Fluorescence kit (RS0039, Immunoway). Human colon carcinoma was tested by S100, CD4, CD8, CD68, PDL1, CKpan mouse mAb with 6 different TSA Fluorescence reagent. Numbers of functional cells (S100, CD4, CD8, CD68, PDL1) was calculated at every 5µm within 100µm range around each tumor cell(CKpan+). Microscopy and pseudocoloring of individual dyes was performed using a Slideviewer Imaging System (Excilone).
