# | Target Information

Gene name PTPRC

**Protein Name** Receptor-type tyrosine-protein phosphatase C

Organism Gene ID UniProt ID

Human <u>942;</u> <u>P08575;</u>

Cellular Localization Cell membrane ; Single-pass type I membrane protein . Membrane raft . Colocalized with

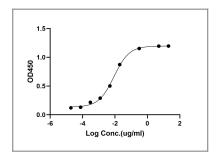

DPP4 in membrane rafts.

**Tissue specificity** Expressed by activated B-lymphocytes and monocytes.

**Function** Protein tyrosine-protein phosphatase required for T-cell activation through the antigen

receptor. Acts as a positive regulator of T-cell coactivation upon binding to DPP4. The first PTPase domain has enzymatic activity, while the second one seems to affect the substrate specificity of the first one. Upon T-cell activation, recruits and dephosphorylates SKAP1 and FYN. Dephosphorylates LYN, and thereby modulates LYN activity (By similarity).(Microbial infection) Acts as a receptor for human cytomegalovirus protein UL11 and mediates binding of UL11 to T-cells, leading to reduced induction of tyrosine phosphorylation of multiple signaling proteins upon T-cell receptor stimulation and impaired T-cell proliferation.
