

Recombinant SARS-CoV-2 (Covid-19) Nucleocapsid protein

CatalogNo: YD2190

Key Features

Reactivity

Human virus

MW

48kD (Calculated)
 50-60kD (Observed)

Applications

• ELISA, ECL, Immunogold,

Recommended Dilution Ratios

Testing in progress

Storage

Storage*

Use a manual defrost freezer and avoid repeated freeze thaw cycles. Store at 2 to 8 °C for one week . Store at -20 to -80 °C for twelve months from the date of receipt.

Basic Information

Source	E.coli
Purification	E.coli
Purity	>90% as determined by SDS-PAGE

Immunogen Information

| Target Information

Gene name

Ν

Protein Name Nucleoprotein

Organism	Gene ID	UniProt ID
Human	QHD43423.2;	

Function

Coronavirus N protein is required for coronavirus RNA synthesis, and has RNA chaperone activity that may be involved in template switch. Nucleocapsid protein is a most abundant protein of coronavirus. N protein packages the positive strand viral genome RNA into a helical ribonucleocapsid (RNP) and plays a fundamental role during virion assembly through its interactions with the viral genome and membrane protein M. Plays an important role in enhancing the efficiency of subgenomic viral RNA transcription as well as viral replication. Because of the conservation of N protein sequence and its strong immunogenicity, the N protein of coronavirus is chosen as a diagnostic tool.
