Immunogen Information

Immunogen The specific immunogen used to produce this antibody is proprietary information.

Specificity MOB1 (Phospho Thr35) Antibody detects endogenous levels of MOB1 protein only when phosphorylated at Thr35. The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):EATLG

Validation Data

Various whole cell lysates were separated by 4-20% SDS-PAGE, and the membrane was blotted with anti-MOB1 (Phospho Thr35) (PT1592R) antibody. The HRP-conjugated Goat anti-Rabbit IgG (H + L) antibody was used to detect the antibody. Lane 1: Jurkat Lane 2: Jurkat was starved overnight with serum and treated with hydrogen peroxide (2mM) for 2 minutes Lane 3: HeLa Lane 4: HeLa was treated with hydrogen peroxide (150μM) for 30 minutes Lane 5: EL-4-B5 Lane 6: EL-4-B5 was treated with hydrogen peroxide (11mM) for 10 minutes Lane 7: HeLa Lane 8: HeLa treated overnight with hydrogen peroxide (150μM) Predicted band size: 25kDa Observed band size: 24kDa

Human tonsil was stained with anti-MOB1 (Phospho Thr35) (PT1592R) Rabbit antibody
