NOX4 Rabbit pAb

CatalogNo: YN2975

Key Features

Host Species

Rabbit

Reactivity

Human,Mouse,Rat

ApplicationsWB,ELISA

MW • 63kD (Observed) Isotype • IgG

Recommended Dilution Ratios

WB 1:500-2000 ELISA 1:5000-20000

Storage

Storage*	-15°C to -25°C/1 year(Do not lower than -25°C)
Formulation	Liquid in PBS containing 50% glycerol, and 0.02% sodium azide.

Basic Information

Clonality Polyclonal

Immunogen Information

Immunogen Synthesized peptide derived from part region of human protein AA range:520-578

Specificity NOX4 Polyclonal Antibody detects endogenous levels of protein.

Target Information

Gene name NOX4 RENOX

otein Name	NADPH oxidase 4 (Kidney oxidase-1) (KOX-1) (Kidney superoxide-producing NADPH oxidase)
	(Renal NAD(P)H-oxidase)

Organism	Gene ID	UniProt ID
Human	<u>50507;</u>	<u>Q9NPH5;</u>
Mouse		<u>Q9JHI8;</u>
Rat		<u>Q924V1;</u>

- **Cellular Localization** Endoplasmic reticulum membrane ; Multi-pass membrane protein. Cell membrane ; Multipass membrane protein . Cell junction, focal adhesion . May localize to plasma membrane and focal adhesions. According to PubMed:15927447, may also localize to the nucleus.; [Isoform 4]: Nucleus . Nucleus, nucleolus .
- **Tissue specificity** Expressed by distal tubular cells in kidney cortex and in endothelial cells (at protein level). Widely expressed. Strongly expressed in kidney and to a lower extent in heart, adipocytes, hepatoma, endothelial cells, skeletal muscle, brain, several brain tumor cell lines and airway epithelial cells.
- **Function** developmental stage:Expressed in fetal kidney and fetal liver.,enzyme regulation:Inhibited by plumbagin (By similarity). Activated by phorbol 12-myristate 13-acetate (PMA). Activated by insulin. Inhibited by diphenylene iodonium., Function: Constitutive NADPH oxidase which generates superoxide intracellularly upon formation of a complex with CYBA/p22phox. Regulates signaling cascades probably through phosphatases inhibition. May function as an oxygen sensor regulating the KCNK3/TASK-1 potassium channel and HIF1A activity. May regulate insulin signaling cascade. May play a role in apoptosis, bone resorption and lipolysaccharide-mediated activation of NFKB. Isoform 3 is not functional. Isoform 4 displays an increased activity while isoform 5 and isoform 6 display reduced activity. May produce superoxide in the nucleus and play a role in regulating gene expression upon cell stimulation., induction: By 7-ketocholesterol (at protein level)., PTM: Isoform 3 and isoform 4 are N-glycosylated. Isoform 4 glycosylation is required for its proper function., similarity: Contains 1 FAD-binding FR-type domain., similarity: Contains 1 ferric oxidoreductase domain., subcellular location: May localize to plasma membrane and focal adhesions. May also localize to the nucleus (PubMed:15927447)..subunit:Interacts with protein disulfide isomerase (By similarity). Interacts with, relocalizes and stabilizes CYBA/p22phox. Interacts with TLR4., tissue specificity: Expressed by distal tubular cells in kidney cortex and in endothelial cells (at protein level). Widely expressed. Strongly expressed in kidney and to a lower extent in heart, adipocytes, hepatoma, endothelial cells, skeletal muscle, brain, several brain tumor cell lines and airway epithelial cells.,
