Function Disease:Overexpressed in most acute myelogenous leukemia (AML) cases (27 over 29).,Function: CNTF is a survival factor for various neuronal cell types. Seems to prevent the degeneration of motor axons after axotomy.,Function: May be involved in transcriptional regulation. May play an important role in cell proliferation and/or anti-apoptosis.,online information: Ciliary neurotrophic factor entry, similarity: Belongs to the CNTF family., similarity: Belongs to the krueppel C2H2-type zinc-finger protein family., similarity: Contains 5 C2H2-type zinc fingers., subunit: Homodimer., tissue specificity: Expressed ubiquitously, particularly at high level in testis. Isoform 2 is testis specific., tissue specificity: Nervous system.,

Validation Data

Western blot analysis of 1) HeLa, 2) Mouse Brain Tissue, 3) Rat Brain Tissue with CNTF Rabbit pAb diluted at 1:2,000.
