# Flk-1/VEGFR2 (Phospho Tyr951) Rabbit pAb

CatalogNo: YP0112

## Key Features

Host Species

Rabbit

ReactivityHuman, Mouse

MW • 152kD (Calculated) lsotype • lgG Applications
• WB,IHC,IF,ELISA

#### **Recommended Dilution Ratios**

WB 1:500-1:2000 IHC 1:100-1:300 IF 1:200-1:1000 ELISA 1:20000 Not yet tested in other applications.

#### **Storage**

Storage\*-15°C to -25°C/1 year(Do not lower than -25°C)FormulationLiquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

#### **Basic Information**

Clonality Polyclonal

# Immunogen Information

ImmunogenThe antiserum was produced against synthesized peptide derived from human VEGFR2<br/>around the phosphorylation site of Tyr951. AA range:917-966

Specificity

Phospho-Flk-1 (Y951) Polyclonal Antibody detects endogenous levels of Flk-1 protein only when phosphorylated at Y951. The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):KDyVG

#### Target Information

Gene name	KDR FLK1 VEGFR2		
Protein Name	Vascular endothelial growth fac <b>Organism</b>	tor receptor 2 Gene ID	UniProt ID
	Human	<u>3791;</u>	<u>P35968;</u>
	Mouse		<u>P35918;</u>
Cellular	Cell junction . Endoplasmic reticulum . Cell membrane . Localized with RAP1A at cell-cell		

- CellularCell Junction : Endoplasmic reticulum : Cell membrane : Localized with RAPIA at cell-cell<br/>junctions (By similarity). Colocalizes with ERN1 and XBP1 in the endoplasmic reticulum in<br/>endothelial cells in a vascular endothelial growth factor (VEGF)-dependent manner<br/>(PubMed:23529610). .; [Isoform 1]: Cell membrane; Single-pass type I membrane protein.<br/>Cytoplasm. Nucleus. Cytoplasmic vesicle. Early endosome. Detected on caveolae-enriched<br/>lipid rafts at the cell surface. Is recycled from the plasma membrane to endosomes and<br/>back again. Phosphorylation triggered by VEGFA binding promotes internalization and<br/>subsequent degradation. VEGFA binding triggers internalization and translocation to the<br/>nucleus.; [Isoform 2]: Secreted .; [Isoform 3]: Secreted.
- **Tissue specificity** Detected in cornea (at protein level). Widely expressed.

FunctionCatalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine<br/>phosphate.,Function:Receptor for VEGF or VEGFC. Has a tyrosine-protein kinase activity.<br/>The VEGF-kinase ligand/receptor signaling system plays a key role in vascular development<br/>and regulation of vascular permeability. In case of HIV-1 infection, the interaction with<br/>extracellular viral Tat protein seems to enhance angiogenesis in Kaposi's sarcoma<br/>lesions.,similarity:Belongs to the protein kinase superfamily. Tyr protein kinase<br/>family.,similarity:Belongs to the protein kinase superfamily. Tyr protein kinase family.<br/>CSF-1/PDGF receptor subfamily.,similarity:Contains 1 protein kinase<br/>domain.,similarity:Contains 7 lg-like C2-type (immunoglobulin-like)<br/>domains.,subunit:Interacts with MYOF (By similarity). Interacts with SHB; upon VEGF<br/>activation. Interacts with HIV-1 Tat.,

#### Validation Data

Immunohistochemistry analysis of paraffin-embedded human breast carcinoma, using VEGFR2 (Phospho-Tyr951) Antibody. The picture on the right is blocked with the phospho peptide.

Western blot analysis of lysates from SK-OV3 cells, using VEGFR2 (Phospho-Tyr951) Antibody. The lane on the left is blocked with the phospho peptide.
