

Hck (Phospho Tyr521) Rabbit pAb

CatalogNo: YP0494

Key Features

| Host Species | |
|--------------|--|
| Rabbit | |

Reactivity

Human,Mouse,Rat

Applications

WB,ELISA

MW • 60kD (Observed) Isotype • lgG

Recommended Dilution Ratios

WB 1:500-1:2000 ELISA 1:10000 Not yet tested in other applications.

Storage

Storage*-15°C to -25°C/1 year(Do not lower than -25°C)FormulationLiquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Basic Information

Clonality Polyclonal

Immunogen Information

Immunogen Synthesized phospho-peptide around the phosphorylation site of human Hck (phospho Tyr521)

Specificity Phospho-Hck (Y521) Polyclonal Antibody detects endogenous levels of Hck protein only when phosphorylated at Y521. The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):SQyQQ

Target Information

| Gene name | НСК | | | |
|--------------------------|--|---------------|----------------|--|
| Protein Name | Tyrosine-protein kinase HCK | | | |
| | Organism | Gene ID | UniProt ID | |
| | Human | <u>3055;</u> | <u>P08631;</u> | |
| | Mouse | <u>15162;</u> | <u>P08103;</u> | |
| | Rat | <u>25734;</u> | <u>P50545;</u> | |
| Cellular Localization | [Isoform 1]: Lysosome. Membrane; Lipid-anchor. Cell projection, podosome membrane; Lipid-anchor. Cytoplasm, cytosol. Associated with specialized secretory lysosomes called azurophil granules. At least half of this isoform is found in the cytoplasm, some of this fraction is myristoylated.; [Isoform 2]: Cell membrane ; Lipid-anchor . Membrane, caveola ; Lipid-anchor . Cell junction, focal adhesion . Cytoplasm, cytoskeleton . Golgi apparatus . Cytoplasmic vesicle . Lysosome . Nucleus . 20% of this isoform is associated with caveolae. Localization at the cell membrane and at caveolae requires palmitoylation at Cys-3. Colocalizes with the actin cytoskeleton at focal adhesions.; Cytoplasmic vesicle, secretory vesicle. Cytoplasm, cytosol. | | | |
| Tissue specificity | I Detected in monocytes and neutrophils (at protein level). Expressed predominantly in cells of the myeloid and B-lymphoid lineages. Highly expressed in granulocytes. Detected in tonsil. | | | |
| Function | Catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine phosphate.,Domain:The SH3 domain mediates binding to HIV-1 Nef.,Function:May serve as part of a signaling pathway coupling the Fc receptor to the activation of the respiratory burst. May also contribute to neutrophil migration and may regulate the degranulation process of neutrophils.,PTM:Isoform p59-HCK contains a N-myristoyl glycine at position 3 (By similarity). Isoform p59-HCK contains a S-palmitoyl cysteine at position 3.,similarity:Belongs to the protein kinase superfamily. Tyr protein kinase family. SRC subfamily.,similarity:Contains 1 protein kinase domain.,similarity:Contains 1 SH2 domain.,similarity:Contains 1 SH3 domain.,subunit:May interact (via SH3 domain) with HIV-1 Nef and Vif. This interaction would stimulates its tyrosine-kinase activity. Interacts (via SH3 domain) with HEV ORF3 protein.,tissue specificity:Expressed predominantly in cells of the myeloid and B-lymphoid lineages., | | | |
