eNOS (Phospho Ser1177) Rabbit pAb

CatalogNo: YP0514

Key Features

Host Species	Reactivity	Applications
• Rabbit	• Human,Mouse,Rat	• WB,IF,ELISA

MW	Isotype
• 130-140kD (Observed)	• IgG

Storage

Storage*	-15°C to -25°C/1 year (Do not lower than -25°C)
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Recommended Dilution Ratios

WB 1:500-1:2000
IF 1:200-1:1000
ELISA 1:20000
Not yet tested in other applications.

Basic Information

Clonality	Polyclonal

Immunogen Information

Immunogen	The antiserum was produced against synthesized peptide derived from human eNOS around the phosphorylation site of Ser1176. AA range:1144-1193
Specificity	Phospho-NOS3 (S1177) Polyclonal Antibody detects endogenous levels of NOS3 protein only when phosphorylated at S1177.The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):TQsFS

Target Information

Gene name NOS3

Protein Name Nitric oxide synthase endothelial

Organism	Gene ID	UniProt ID
Human	4846;	P29474;
Mouse	18127;	P70313;
Rat	24600;	Q62600;

Cellular Localization Cell membrane. Membrane , caveola. Cytoplasm , cytoskeleton. Golgi apparatus. Specifically associates with actin cytoskeleton in the G2 phase of the cell cycle; which is favored by interaction with NOSIP and results in a reduced enzymatic activity.

Tissue specificity Platelets , placenta , liver and kidney.

Function Catalytic activity:L-arginine + n NADPH + n H (+) + m O (2) = citrulline + nitric oxide + n NADP (+) . ,cofactor:Binds 1 FAD. ,cofactor:Binds 1 FMN. ,cofactor:Heme group. ,cofactor:Tetrahydrobiopterin (BH4) . May stabilize the dimeric form of the enzyme. ,enzyme regulation:Stimulated by calcium/calmodulin. Inhibited by NOSIP and NOSTRIN. ,Function:Produces nitric oxide (NO) which is implicated in vascular smooth muscle relaxation through a cGMP-mediated signal transduction pathway. NO mediates vascular endothelial growth factor (VEGF) -induced angiogenesis in coronary vessels and promotes blood clotting through the activation of platelets. ,online information:Nitric oxide synthase entry ,polymorphism:Variation in NOS3 seem to be associated with susceptibility to coronary spasm. ,similarity:Belongs to the NOS family. ,similarity:Contains 1 FAD-binding FR-type domain. ,similarity:Contains 1 flavodoxin-like domain. ,subcellular location:Specifically associates with actin cytoskeleton in the G2 phase of the cell cycle; which is favored by interaction with NOSIP and results in a reduced enzymatic activity. ,subunit:Homodimer. Interacts with NOSIP and NOSTRIN. ,tissue specificity:Platelets , placenta , liver and kidney. ,
