GRB10 (Phospho Tyr67) Rabbit pAb

CatalogNo: YP0557 Orthogonal Validated 💽

Key Features

Host Species	Reactivity	Applications
• Rabbit	• Human,Rat,Mouse,	• WB,IHC,IF,ELISA
MW • 67kD (Observed)	Isotype • IgG	

Recommended Dilution Ratios

WB 1:500-1:2000 IHC 1:100-1:300 IF 1:200-1:1000 ELISA 1:20000 Not yet tested in other applications.

Storage

Storage* -15°C to -25°C/1 year(Do not lower than -25°C)

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Basic Information

Clonality Polyclonal

Immunogen Information

Immunogen The antiserum was produced against synthesized peptide derived from human GRB10 around the phosphorylation site of Tyr67. AA range:33-82

Specificity

Phospho-GRB10 (Y67) Polyclonal Antibody detects endogenous levels of GRB10 protein only when phosphorylated at Y67.The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):SLySA

Target Information

Gene name	GRB10			
Protein Name	Growth factor receptor-bound protein 10			
	Organism	Gene ID	UniProt ID	
	Human	<u>2887;</u>	<u>Q13322;</u>	
	Mouse		<u>Q60760;</u>	
Cellular Localization	Cytoplasm . When complexed with NEDD4 and IGF1R, follows IGF1R internalization, remaining associated with early endosomes. Uncouples from IGF1R-containing endosomes before the sorting of the receptor to the lysosomal compartment (By similarity)			
Tissue specificity	Widely expressed in fetal and adult tissues, including fetal and postnatal liver, lung, kidney, skeletal muscle, heart, spleen, skin and brain.			
Function	Alternative products:Additional isoforms seem to exist,Function:Plays a functional role in insulin and IGF-I signaling. May serve to positively link the insulin and IGF-I receptors to an uncharacterized mitogenic signaling pathway. Interacts with the cytoplasmic domain of the autophosphorylated insulin receptor which is then inhibited. The interaction is mediated by the SH2 domain. Also binds activated platelet-derived growth factor receptor and epidermal growth factor receptor.,similarity:Belongs to the GRB7/10/14 family.,similarity:Contains 1 PH domain.,similarity:Contains 1 Ras-associating domain.,similarity:Contains 1 SH2 domain.,subunit:Interacts with GIGYF1/PERQ1 and GIGYF2/TNRC15.,tissue specificity:Highly expressed in skeletal muscle.,			

Validation Data

Western Blot analysis of COLO cells using Phospho-GRB10 (Y67) Polyclonal Antibody

Immunohistochemical analysis of paraffin-embedded Human brain. Antibody was diluted at 1:100(4° overnight). High-pressure and temperature Tris-EDTA,pH8.0 was used for antigen retrieval. Negetive contrl (right) obtaned from antibody was pre-absorbed by immunogen peptide.

Enzyme-Linked Immunosorbent Assay (Phospho-ELISA) for Immunogen Phosphopeptide (Phospho-left) and Non-Phosphopeptide (Phospho-right), using GRB10 (Phospho-Tyr67) Antibody

Immunofluorescence analysis of HepG2 cells, using GRB10 (Phospho-Tyr67) Antibody. The picture on the right is blocked with the phospho peptide.

Western blot analysis of lysates from NIH/3T3 cells treated with Insulin 0.01U/ml 15', using GRB10 (Phospho-Tyr67) Antibody. The lane on the right is blocked with the phospho peptide.
