IRS-1 (Phospho Ser323) Rabbit pAb

CatalogNo: YP0881 Orthogonal Validated 💽

Key Features

Host Species • Rabbit	Reactivity Human,Mouse,Rat,Monkey 	Applications • WB,IHC,IF,ELISA
MW • 170kD (Observed)	Isotype • IgG	

Recommended Dilution Ratios

WB 1:500-1:2000 IHC 1:100-1:300 IF 1:200-1:1000 ELISA 1:10000 Not yet tested in other applications.

Storage

Storage* -15°C to -25°C/1 year(Do not lower than -25°C)

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Basic Information

Clonality Polyclonal

Immunogen Information

ImmunogenThe antiserum was produced against synthesized peptide derived from human IRS-1
around the phosphorylation site of Ser323. AA range:289-338

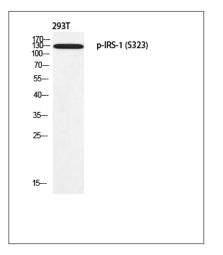

Specificity

Phospho-IRS-1 (S323) Polyclonal Antibody detects endogenous levels of IRS-1 protein only when phosphorylated at S323. The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):PGsFR

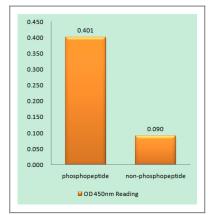

Target Information

Gene name	IRS1			
Protein Name	Insulin receptor substrate 1 Organism Gene ID UniProt ID			
	Human	<u>3667;</u>	<u>P35568;</u>	
	Mouse	<u>16367;</u>	<u>P35569;</u>	
	Rat	<u>25467;</u>	<u>P35570;</u>	
Cellular Localization	nucleus,cytoplasm,cytosol,plasma membrane,insulin receptor complex,caveola,intracellular membrane-bounded organelle,			
Tissue specificity	Epithelium,Eye,Skeletal muscle,			
Function	Disease:Polymorphisms in IRS1 may be involved in the etiology of non-insulin-dependent diabetes mellitus (NIDDM) [MIM:125853].,Function:May mediate the control of various cellular processes by insulin. When phosphorylated by the insulin receptor binds specifically to various cellular proteins containing SH2 domains such as phosphatidylinositol 3-kinase p85 subunit or GRB2. Activates phosphatidylinositol 3-kinase when bound to the regulatory p85 subunit.,polymorphism:The Arg-971 polymorphism impairs the ability of insulin to stimulate glucose transport, glucose transporter translocation, and glycogen synthesis by affecting the PI3K/AKT1/GSK3 signaling pathway. The polymorphism at Arg-971 may contribute to the in vivo insulin resistance observed in carriers of this variant. Arg-971 could contribute to the risk for atherosclerotic cardiovascular diseases associated with non-insulin-dependent diabetes mellitus (NIDDM) by producing a cluster of insulin resistance-related metabolic abnormalities. In insulin-stimulated numan endothelial cells from carriers of the Arg-971 polymorphism, genetic impairment of the IRS1/PI3K/PDPK1/AKT1 insulin signaling cascade results in impaired insulin-stimulated nitric oxide (NO) release and suggested that this may be a mechanism through which the Arg-971 polymorphism contributes to the genetic predisposition to develop endothelial dysfunction and cardiovascular disease. The Arg-971 polymorphism not only reduces phosphorylation of the substrate but allows IRS1 to act as an inhibitor of PI3K, producing global insulin resistance.,PTM:Phosphorylation of IRS1 interaction with the insulin receptor,similarity:Contains 1 IRS-type PTB domain.,similarity:Contains 1 PH domain.,simularity:Contains 1 IRS-type PTB domain.,similarity:Contains 1 PH domain.,simularity. Interacts with SOCS7.,			

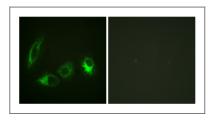

Validation Data

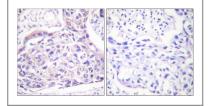

Western blot analysis of 293T using p-IRS-1 (S323) antibody. Antibody was diluted at 1:1000 $\,$

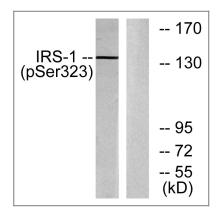

Enzyme-Linked Immunosorbent Assay (Phospho-ELISA) for Immunogen Phosphopeptide (Phospho-left) and Non-Phosphopeptide (Phospho-right), using IRS-1 (Phospho-Ser323) Antibody

Immunofluorescence analysis of HeLa cells, using IRS-1 (Phospho-Ser323) Antibody. The picture on the right is blocked with the phospho peptide.

Immunohistochemistry analysis of paraffin-embedded human breast carcinoma, using IRS-1 (Phospho-Ser323) Antibody. The picture on the right is blocked with the phospho peptide.

Western blot analysis of lysates from COS7 cells treated with Serum 20% 15', using IRS-1 (Phospho-Ser323) Antibody. The lane on the right is blocked with the phospho peptide.
