

Survivin (Phospho Thr117) Rabbit pAb

CatalogNo: YP1132

Key Features

Host SpeciesRabbit

ReactivityHuman,Mouse,Rat

Applications

IHC,IF,ELISA

MW • 16kD (Calculated) Isotype • IgG

Recommended Dilution Ratios

IHC 1:100-1:300 IF 1:200-1:1000 ELISA 1:5000 Not yet tested in other applications.

Storage

Storage*-15°C to -25°C/1 year(Do not lower than -25°C)FormulationLiquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Basic Information

Clonality Polyclonal

Immunogen Information

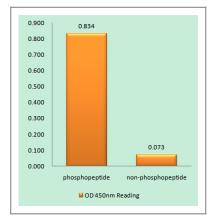

ImmunogenThe antiserum was produced against synthesized peptide derived from human Survivin
around the phosphorylation site of Thr117. AA range:86-135

Specificity Phospho-Survivin (T117) Polyclonal Antibody detects endogenous levels of Survivin protein only when phosphorylated at T117.The name of modified sites may be influenced by many factors, such as species (the modified site was not originally found in human samples) and the change of protein sequence (the previous protein sequence is incomplete, and the protein sequence may be prolonged with the development of protein sequencing technology). When naming, we will use the "numbers" in historical reference to keep the sites consistent with the reports. The antibody binds to the following modification sequence (lowercase letters are modification sites):KEtNN

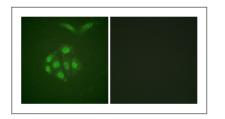

Target Information

Gene name	BIRC5		
Protein Name	Baculoviral IAP repeat-containing protein 5		
	Organism	Gene ID	UniProt ID
	Human	<u>332;</u>	<u>015392;</u>
	Mouse	<u>11799;</u>	<u>070201;</u>
	Rat	<u>64041;</u>	<u>Q9JHY7;</u>
Cellular Localization	Cytoplasm . Nucleus . Chromosome . Chromosome, centromere . Cytoplasm, cytoskeleton, spindle . Chromosome, centromere, kinetochore . Midbody . Localizes at the centromeres from prophase to metaphase, at the spindle midzone during anaphase and a the midbody during telophase and cytokinesis. Accumulates in the nucleus upon treatment with leptomycin B (LMB), a XPO1/CRM1 nuclear export inhibitor (By similarity). Localizes on chromosome arms and inner centromeres from prophase through metaphase. Localizes to kinetochores in metaphase, distributes to the midzone microtubules in anaphase and at telophase, localizes exclusively to the midbody (PubMed:11084331). Colocalizes with AURKB at mitotic chromosomes (PubMed:14610074). Acetylation at Lys-129 directs its localization to the nucleus by enhancing homodimerization and thereby inhibiting XPO1/CRM1-mediated nuclear export (PubMed:20826784)		
Tissue specificity	Expressed only in fetal kidney and liv (PubMed:10626797). Abundantly exp breast, and prostate) and in high-gra PubMed:16329164). Also expressed in (PubMed:10626797). Expressed in co interdental cells of the Limbus as well and the spiral ganglions (at protein les sulcus or the Reissner's membrane (a PubMed:20627126).	ressed in adenocarcinoma (lun de lymphomas (PubMed:14741 n various renal cell carcinoma ichlea including the organ of Co I as in Schwann cells and cells evel). Not expressed in cells of	g, pancreas, colon, 722, cell lines orti, the lateral wall, the of the cochlear nerve the inner and outer
Function	Domain:The BIR repeat is necessary role in neoplasia. May counteract a d with tubulin. Inhibitor of caspase-3 ar passenger complex (CPC), a complex complex has essential functions at th alignment and segregation and is rec and spindle assembly. Isoforms 2 and 3 shows a marked reduction in its an wild-type isoform.,similarity:Belongs repeat.,subcellular location:Localizes prophase through metaphase and the from anaphase through cytokinesis. O chromosomes.,subunit:Homodimer. W resulting complex binds pro-caspase efficiently. Component of the CPC at INCENP and AURKB/Aurora-B. Interact kidney and liver, and to lesser extent adenocarcinoma (lung, pancreas, col lymphomas. Also expressed in variou	efault induction of apoptosis in ad caspase-7. Component of the that acts as a key regulator of the centromere in ensuring corre- guired for chromatin-induced m d 3 do not appear to play vital r ti-apoptotic effects when comp to the IAP family.,similarity:Cor- on chromosome arms and inne- en transferring to the spindle m Colocalizes with AURKB at mito When phosphorylated, interacts 9, as well as active caspase-9, least composed of BIRC5/surviv ts with EVI5.,tissue specificity:E t, lung and brain. Abundantly ex- on, breast, and prostate) and in	G2/M phase. Interacts e chromosomal mitosis. The CPC ect chromosome icrotubule stabilization roles in mitosis. Isoform ared with the displayed ntains 1 BIR er centromeres from hidzone and midbody tic s with HBXIP; the but much less vin, CDCA8/borealin, Expressed only in fetal xpressed in h high-grade

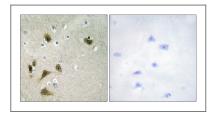

Validation Data

Enzyme-Linked Immunosorbent Assay (Phospho-ELISA) for Immunogen Phosphopeptide (Phospho-left) and Non-Phosphopeptide (Phospho-right), using Survivin (Phospho-Thr117) Antibody

Immunofluorescence analysis of A549 cells, using Survivin (Phospho-Thr117) Antibody. The picture on the right is blocked with the phospho peptide.

Immunohistochemistry analysis of paraffin-embedded human brain, using Survivin (Phospho-Thr117) Antibody. The picture on the right is blocked with the phospho peptide.
