Function Disease:Defects in TGFB3 are a cause of familial arrhythmogenic right ventricular dysplasia 1 (ARVD1) [MIM:107970]; also known as arrhythmogenic right ventricular cardiomyopathy 1 (ARVC1). ARVD is an autosomal dominant disease characterized by partial degeneration of the myocardium of the right ventricle, electrical instability, and sudden death. It is clinically defined by electrocardiographic and angiographic criteria; pathologic findings, replacement of ventricular myocardium with fatty and fibrous elements, preferentially involve the right ventricular free wall.,Function:Involved in embryogenesis and cell differentiation.,online information:TGF beta-3 entry,similarity:Belongs to the TGF-beta family.,subunit:Homodimer; disulfide-linked.,
