### Cellular Localization

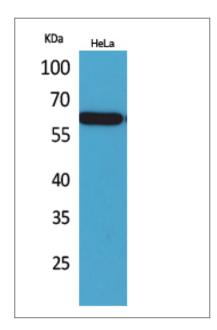

Cell membrane; Single-pass membrane protein. Cell junction, synapse, postsynaptic cell membrane.

**Tissue specificity** Predominantly expressed in testis and placenta as well as in many cell lines, including epithelial cell lines.

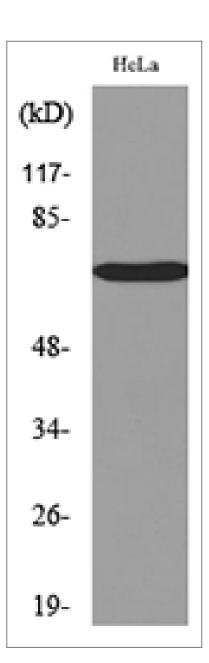

### **Function**

Function: Plays a role in cell-cell adhesion through heterophilic trans-interactions with nectin-like proteins or nectins, such as trans-interaction with PVRL2/nectin-2 at Sertolispermatid junctions. Trans-interaction with PVR induces activation of CDC42 and RAC small G proteins through common signaling molecules such as SRC and RAP1. Also involved in the formation of cell-cell junctions, including adherens junctions and synapses. Induces endocytosis-mediated down-regulation of PVR from the cell surface, resulting in reduction of cell movement and proliferation. Plays a role in the morphology of the ciliary body., similarity: Belongs to the nectin family., similarity: Contains 1 Ig-like V-type (immunoglobulin-like) domain., similarity: Contains 2 lg-like C2-type (immunoglobulin-like) domains., subunit: Cis- and trans-homodimer. Can form trans-heterodimers with PVRL1/nectin-1, PVRL2/nectin-2, PVR, IGSF4B/Necl-1 and with IGSF4. Interacts with MLLT4/afadin. Binds with low affinity to TIGIT., tissue specificity: Predominantly expressed in testis and placenta as well as in many cell lines, including epithelial cell lines.
